

ProFlon PTFE 20% Concentrate

DISPERSIONS

49102910

Highly stable PTFE highly concentrated dispersion

This product is a concentrated dispersion of PolyTetraFluoroEthylene (PTFE) in refined mineral oil with excellent suspension stability. An exclusive particle selection as well as the special production process has made it possible to create a very high stability in the dispersions specially compared to similar products, which often separates and end on the bottom of the mixture..

This product are suitable for concentrate as additive for mineral oils , PAO and esters, aerosol lubricants, additive for formulators of industrial lubricants : oils, greases and pastes , automotive additives, automotive lubricants, assembly lubrication, cutting fluids. ProFlon can also help against leaking seals by filling gaps.

Benefits

- Provides thin smooth coating with PTFE
- Effective lubricant for all metal surfaces
- Excellent suspension properties
- High solids content 20%
- Reduces friction and wear considerably
- Increases load carrying capacity of oils
- Lower energy cost and Carbon footprint
- Prevents scoring or seizure
- Disperse easily for aerosol manufacturers

Available packings:

1 Liter - 18,14 kg pails and 180 kg drums.

We can supply base oil if needed for dilution before use/packing
